

RATEFLUENCER AI HACKATHON 2026

Building the Future of Influencer Intelligence and AI-Powered Content Creation

Overview

Ratefluencer AI Hackathon 2026 is a 48-hour innovation challenge designed to bring together students, developers, AI engineers, data scientists, and creators to solve some of the biggest challenges in influencer marketing.

Participants will build AI-powered systems capable of:

- Discovering and ranking influencers using Machine Learning
- Predicting influencer growth and campaign success
- Detecting fake followers and engagement
- Matching brands with the right creators
- Discovering trending topics in real time
- Generating viral reels automatically
- Creating LinkedIn and Instagram content using AI
- Predicting content virality before publishing

The objective is to build intelligent systems that help brands identify high-performing creators and help creators grow through AI-driven content generation.

Event Details

Duration

48 Hours

Team Size

1–4 Members

Eligibility

Open to:

- Students
- Developers

- AI Engineers
 - Data Scientists
 - Product Builders
 - Content Creators
 - Marketing Enthusiasts
-

Challenge Tracks

Participants may choose to build solutions for one or both tracks.

Track 1: AI Influencer Intelligence Engine

Problem Statement

Brands invest billions of dollars every year in influencer marketing, yet most influencer selection decisions are still based on vanity metrics such as follower counts.

Follower counts alone do not predict campaign success.

Teams must build an AI-powered Influencer Intelligence Engine capable of identifying the most valuable creators using machine learning and data-driven insights.

Objectives

Build a platform that can:

- Analyze influencer profiles
 - Detect fake followers and engagement
 - Predict future creator growth
 - Estimate campaign success probability
 - Recommend ideal brand partnerships
 - Generate an overall Ratefluencer Score
-

Required Components

Influencer Data Collection

Collect and analyze:

- Followers
 - Following
 - Likes
 - Comments
 - Shares
 - Saves
 - Views
 - Posting Frequency
 - Audience Demographics
-

Authenticity Detection

Detect:

- Purchased followers
- Engagement pods
- Bot activity
- Artificial engagement spikes

Output:

Authenticity Score (0–100)

Growth Prediction Engine

Predict:

- Future follower growth
- Future engagement growth
- Audience expansion

Output:

Growth Potential Score (0–100)

Brand Matching System

Recommend the most suitable brands for each creator using:

- Natural Language Processing
- Embeddings
- Similarity Search
- Retrieval-Augmented Generation (RAG)

Output:

Brand Match Score (0–100)

ML-Based Ratefluencer Score™

Participants must develop a Machine Learning model capable of predicting campaign success.

Suggested Features

- Engagement Rate
- Share Rate
- Save Rate
- Audience Quality
- Posting Consistency
- Growth Rate
- Comment Quality
- Content Category
- Audience Demographics

Suggested Models

- Logistic Regression
- Random Forest
- XGBoost
- LightGBM
- CatBoost
- Neural Networks

Output

Influencer Score (0–100)

Example:

- Influencer A: 94
- Influencer B: 82

- Influencer C: 68

The goal is to rank creators based on predicted business impact rather than follower count.

Track 2: AI Viral Reel Creator Agent

Problem Statement

Creators spend significant time searching for trends, creating content, editing videos, writing captions, and publishing content.

Teams must build an AI Agent capable of automating the entire content creation workflow.

Objectives

Create an AI-powered system that can:

- Discover trending topics
 - Generate content ideas
 - Create reel scripts
 - Produce ready-to-post content
 - Generate LinkedIn posts
 - Generate Instagram captions
 - Predict virality before publishing
-

Required Workflow

Trend Discovery Engine

Identify trending topics from:

- Artificial Intelligence
- Technology
- Business
- Startups
- Finance
- Creator Economy

Suggested Sources:

- Reddit
- LinkedIn

- YouTube
 - News Platforms
 - Social Media Trends
-

Trend Ranking Engine

Rank trends using Machine Learning based on:

- Growth Velocity
- Search Interest
- Engagement Potential
- Novelty
- Audience Relevance

Output:

Trend Score (0–100)

Script Generation

Generate:

- Hook
- Story
- Key Insights
- Call-to-Action

Output:

30–60 Second Reel Script

Automated Reel Generation

Generate:

- Voiceovers
- Captions
- Subtitles
- Thumbnails
- B-Roll
- Visual Assets

Suggested Technologies:

- OpenClaw
- OpenAI
- Claude
- Gemini
- ElevenLabs
- Runway
- Veo
- LangGraph
- CrewAI
- n8n

LinkedIn Content Generation

Automatically generate:

- LinkedIn Posts
- Professional Captions
- Hashtags
- Engagement Hooks

Output:

Ready-to-publish LinkedIn content.

Instagram Content Generation

Automatically generate:

- Reel Captions
- Hashtags
- Engagement Calls-to-Action

Output:

Ready-to-publish Instagram content.

Virality Prediction Engine

Predict:

- Expected Views
- Expected Likes

- Expected Shares
- Expected Saves

Output:

Virality Score (0–100)

Grand Challenge

Build the Future of AI-Powered Influence

Teams are encouraged to build a complete Ratefluencer AI ecosystem that can:

Influencer Intelligence

- Identify high-potential influencers before they become mainstream
- Detect fake engagement and bot activity
- Predict future creator growth
- Estimate campaign success probability
- Recommend the best brand partnerships

Viral Content Intelligence

- Discover trending topics in real time
- Rank trends using Machine Learning
- Generate viral reel concepts
- Create complete video scripts
- Generate captions and hashtags
- Produce LinkedIn and Instagram-ready content

Autonomous AI Agent

The ultimate solution should be capable of:

1. Discovering trends automatically
 2. Creating short-form video content
 3. Generating LinkedIn posts
 4. Generating Instagram captions
 5. Predicting virality before publishing
 6. Learning from engagement performance
 7. Continuously improving future content recommendations
-

Deliverables

Every team must submit:

GitHub Repository

- Source Code
- README
- Setup Instructions

Architecture Diagram

- System Architecture
- AI Workflow
- Data Flow

Demo Video

5–7 Minutes

Presentation Deck

Include:

- Problem Statement
- Solution Overview
- AI Architecture
- Machine Learning Models
- Results
- Future Enhancements

Working Prototype

Accepted formats:

- Web Application
 - Mobile Application
 - API Service
 - Streamlit Application
 - AI Agent Workflow
-

Judging Criteria

Category	Points
AI / ML Innovation	20
Influencer Scoring Accuracy	20
Viral Prediction Capability	15
Automation & Agent Design	15
Product Design & User Experience	10
Business Impact	10
Technical Complexity	5
Final Presentation & Demo	5

Total: 100 Points

Why This Matters

The future of influencer marketing is not just finding creators.

The future is:

- Predicting influence before it happens
- Measuring true creator impact
- Generating viral content using AI
- Helping brands make better partnership decisions
- Helping creators grow through intelligent automation

Ratefluencer aims to become the AI-powered platform that connects influencer intelligence, viral content creation, and creator growth into a single ecosystem.

This hackathon is an opportunity for participants to build the next generation of AI products that will shape the future of the creator economy.
